For the attention of Mr. C. Motha

Dear Sirs,

I must apologise for the delay in replying to your letter of 13th August 1966, but the writer has just returned from an overseas tour.

The Head of our Technical Training School has given us a full report on Mr. Cooray.

"Mr. Cooray spent the majority of his time on the Demonstration Site in the care of Mr. Price and the Site Engineers but approximately 2 weeks of this time was spent in the Training School studying the Plessey M.T.I. system. I have therefore divided the comments into two sections.

DEMONSTRATION SITE

Mr. Cooray was given a complete brief on all Plessey Radar Equipment and proved at all times to be most interested and enthusiastic. It is considered that this period of practical training was entirely satisfactory.

TRAINING SCHOOL

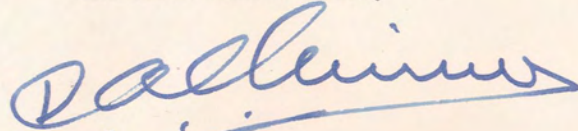

Mr. Cooray undertook a detailed study of the Plessey Radar M.T.I. system and proved to be very knowledgeable. He was an ideal student in all respects.

cont/.....

It is the opinion of the Instructor concerned that at the conclusion of the 2 week period Mr. Cooray had gained a very sound knowledge of the principles and practice of M.T.I."

As you can see from the above report we find Mr. Cooray to be a very satisfactory student and feel that his period of training with us was very well worthwhile.

Yours faithfully
PLESSEY RADAR LTD.,

D.A.B. Smith
Far East and Pacific Representative
